***Reasons for allowance***

The following is an examiner's statement of reasons for allowance:

The instant invention is deemed to be directed to an unobvious improvement to a supply device of braking fluid for a braking system over U.S. Patent No. 5,826,845 which teaches a supply device 10 of braking fluid for a braking system, comprising at least one reservoir 14 for supplying a master cylinder, and a rigid support 16 for said reservoir 14, the said reservoir 14 comprising means for flow of braking fluid in braking system.

The improvement comprises first attachment means able to collaborate with second attachment means borne by the rigid support, the first attachment means and the second attachment means comprising male and female elements collaborating with one another, and elastic means being inserted between the male elements and the female elements characterized in that the means for flow of braking fluid and the first attachment means are separate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Prior Art***

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consist of five patents.

La Brie (2,095,752) is cited to show a reservoir, a rigid support, connection for flow of fluid but fails to teach attachment male and female elements collaborating with each other and elastic sleeve.

Dick (2,241,188) is cited to show a reservoir, a rigid support, connection for flow of fluid but fails to teach attachment male and female elements collaborating with each other and elastic sleeve.

Come (4,217,922) is cited to show a reservoir, and connection for flow of fluid but fails to teach attachment female elements collaborating with each other and elastic sleeve and a rigid support.

Murata (4,346,865) is cited to show a reservoir, a rigid support, connection for flow of fluid but fails to teach attachment male and female elements collaborating with each other and elastic sleeve.
